

ANDRIA SIMIĆ

FULL STACK DEVELOPER

simic.andria06@gmail.com 

0694611699 

EXPERIENCES

ExamRoom.AI, Belgrade

Medior Full Stack Developer

March 2023 - Present

- Developed a notification microservice using Angular, .NET, SignalR, DynamoDB, and Kafka, enabling real-time notifications with a scalable event-driven architecture, integrated it into multiple projects for seamless real-time updates
- Created custom NuGet packages for SignalR and Kafka to standardize usage and simplify integration across various services
- Implemented Redis caching, optimizing performance and reducing database load for improved application efficiency.
- Bulk Item Import Module developed Excel templates for bulk item creation and translation of existing items, with FluentValidation based backend validation, automatic cell population, and dependent field validation to reduce manual data entry and minimize errors.
- Developed and integrated a new module, enhancing application functionality and user experience.
- Refactored the Minimal API structure, improving readability, maintainability, and efficiency, ensuring cleaner code and better organization.
- Maintained and enhanced existing functionalities, ensuring system stability and performance improvements.

V-IT Construction & Engineering D.O.O, Belgrade

Software Developer

March 2021 - March 2023

- Worked on an internal ÖBB (Austrian Federal Railways) application for managing tenders, using Angular, .NET MVC, and Vue.js.
- Developed and maintained ADM (Address Master) for the GIS system using Angular and Spring Boot, including user authentication, login, and password recovery.
- Conducted weekly meetings with key users to gather feedback, clarify requirements, and align solutions with business needs.
- Talend ESB project migration, ensuring a smooth transition with minimal disruption.
- Integrated and optimized Elasticsearch with Spring Boot and Talend to improve data retrieval and search performance.
- Developed and maintained ActiveMQ messaging integrations within Talend ESB

EDUCATION

University - School of Electrical and Computer Engineering

2017 - 2020 | Bachelor in Information Systems

Secondary school - Technical school Smederevo

2013 - 2017 | Process control electrician

SKILLS

- C#, .NET WEB API, SignalR, Dapper, Entity Framework, .NET MVC
- JavaScript, Angular, RxJS, NgRx
- SQL, MS SQL, DynamoDB
- AWS, ElastiCache, SQS, IAM, S3, Secrets Manager, EC2, Redis, Elasticsearch, Kafka
- GitHub, GitLab
- Jira, Scrum
- Bootstrap, Material UI, DevExtreme
- Talend ESB

FREELANCE

Sirius - Management Systems Certification (ISO)

Full-Stack developer

February 2022 - February 2023

New module development and adaptive maintenance of Sirius application built with Angular, .NET Web API, and MS SQL

SDDITG, Belgrade

Intern Java

June 2020 - July 2020

Android Employee Access Control App:

- Built a native Android CRUD application integrating a Swagger-documented API to query, authenticate, and manage role-based employee access permissions

LANGUAGES

Serbian

- native language

English

- Fluent in English, with strong written and verbal communication skills in professional and technical environments.

PERSONAL PROEJCTS

<https://github.com/AirDNA6/react-nbs>

Description: The application integrates the National Bank of Serbia API (NBS), storing retrieved data in a MySQL database. Node.js and Express.js handle data processing and retrieval, while React.js provides a smooth and responsive frontend.

<https://github.com/AirDNA6/crypt>

Description: The Cinema Crypt web application was built using the Movie Database API (TMDB) and React.js.
